

Originally, Keencut provided all precision cutter bars with the Series 1 cutting head. In 2011, Keencut changed the design to the Evolution, Sabre GPC and Javelin Cutters. The redesigned Evolution-E2, Sabre Series 2, Javelin Series 2 and new Javelin Integra now feature a Series 2 vertical action cutting head. The Evolution-E2 is the only one of this series to include a double vertical action cutting head where the Sabre Series 2, Javelin Series 2 and Javelin Integra all include the single vertical action cutting head. The cutting head design change has improved the performance and durability to the cutter. The Simplex and Max cutters still feature the Series 1 cutting head.

If you have an old style (Series 1) cutting head, an upgrade to the 60394 Series 2 Single Vertical Action Cutting Head is available. It is recommended to only upgrade to this cutting head if your cutter bar is in like-new condition in order to receive quality cutting performance.

(60394) Series 2 Single Vertical Action Cutting Head

Identified by the vertical cutting action. Replacement Blades are 69131 Graphik Blades for the Graphik blade holder, 69108 Medium-duty Blades or 69119 Superior Quality Blades for the Medium-duty blade holder and 69132 45mm Textile Cutting Wheels for the 45mm Textile blade holder.
