

Designed specifically for fabric graphics cutting and finishing, Foster Keencut's Heat Knife Carrier fits on the Sabre, Sabre 2, Evolution and Evolution-E2 cutter bars. The carrier device accepts the AZTC heat knives and blades.

What you can expect:

### Accuracy.

Human errors and makeshift straight edges are now a thing of the past. With a single Allen key adjustment, the Heat Knife Carrier attaches directly to your Foster Keencut cutter bar. The Heat Knife cuts approximately ¼ inch from the cutter's aluminum extrusion bar, ensuring precision straight-line fabric cuts in the same location every time.

### Speed.

Your shop can accommodate today's high-demand fabric graphics – and more of them – using the heated blades of HSGM knives that cut and seal the edges of synthetic fabrics. Eliminate the time associated with cumbersome hand-cutting and final trimming of frayed or unraveled edges.

### Safety.

The Heat Knife Carrier is safe to use. When the spring-loaded Heat Knife is depressed, a center post triggers the heating mechanism. As soon as it is released, the heating element automatically turns off.

The AZTC Heat Knife and Carrier does not interfere with the Evolution or Sabre's cutting head.

AZTC Heat Knife Carrier easily attaches to a Sabre Series Cutter.
